

# Prevent Your Facebook Account From Being Hacked

## 01-Turn On Login Alert

When you turn on login alert you will be notified any time someone logs into your account from a new computer or phone.

## 02-Enable Login Approvals

When you turn on login approvals, you'll be asked to enter a login approval code each time you access your facebook account from a new computer or phone.

## 03-Add Open PGP Public Key

PGP stands for pretty good privacy and is used to encrypt email communications and receive encrypted notifications emails. It requires two keys—one public, other private—to protect email. The sender needs to know the recipient's public key to encrypt the message, and then the recipient uses his or her private key to decrypt it.

## 04-Enable App Passwords

Go to app passwords and have the tool generate unique passwords for your apps instead of using your facebook password.

## 05-Create Your Trusted Contact List

Trusted contacts list are friends you can contact if your ever need help getting into your facebook account.

## 06-Limit The Privacy Of Data You Post

Take advantage of the privacy settings available in your account.

- Who can seen my stuff.
- Who can contact me.
- Who can look me up

Click edit button on the top right corner and set you privacy

## 07- Control The Posts To Be Tagged In Your Timeline

You get to decide whether friends are allowed to post things on your timeline or not and also decide whether you want to review posts that friends tag you in before they appear on your timeline.

- Who can add things to my timeline?
- Who can see things on my timeline?
- How can I manage tags peoples add and tagging suggestions?

## 08-manage blocking

You can manage the pages, profiles etc., from viewing your profile through this setting.

## 09- Change Your Password Regularly

Don't use same passwords for all your accounts. The harder you passwords the safer you are.
